

Leaving your laptop unattended at a public place? **THINK TWICE!**

Dear Investor,

Greetings from SMIFS Limited and thank you for being our valued client.

SEBI and Stock Exchanges, as market regulators are always keeping a vigilance check on suspicious activities and looking to punish money swindlers. Yet, a little awareness and alertness on your part can go a long way in keeping your investments safe.

An unattended laptop in a public place is an invitation for data thieves to access your passwords and use them to get hold of confidential information and hack your accounts at a later date.

Remember to keep your laptop Password protected and Firewall enabled to prevent unauthorized access to your data. Ensure to use an Antivirus updated to latest version which shall protect by detecting Malware that might get into your laptop while unattended.

Take a few moments to secure your investment before you walk away. These tips are simple, easy and relatively inexpensive saving you from Cyber Criminals at any public place.

Remember. It's always better to be safe than sorry.

Assuring you best of our services.
