

The Nifty previous session ended 1.07% down at 13,817.55. It opened on a weaker note and continued declining throughout the session, however, minor recovery in the end led to finishing off with a Doji candle. The 50 exponential MA placed around 13,700 on daily helped the recovery, day's low was 13,713.25. Recovery from around 50 exponential MA is likely to sustain, in that case we might see pullback towards 14,100. However, staying cautious on rise around 30 exponential MA placed around 14,100 is advised.

On the Nifty hourly chart; being extremely oversold we might see a sharp pullback towards 200 exponential MA placed around 14,080 levels, where the benchmark index may again find aggressive sellers.

Nifty patterns on multiple time frames suggest; finishing off the session with a Doji implies indecision. Hence, the benchmark index may continue trading range-bound with negative bias within the price band of 13,700-14,100.
