Cotton yesterday settled up by 1.23% at 23070 after CAI has revised higher Indian cotton export estimates for 2020-21 season at 65 lakh bales against 60 lakh bales projected till last month. Cotton production in Haryana is expected to decline by 27 percent to 1.8 million bales in 2020-21 (July-June) season due to yield loss. India's cotton output in the 2020-21 (October-September) market year is seen at 38 million bales, up 4 percent on the year. The country's cotton exports are likely to be 20 percent higher at 1.02 million tonnes in 2020-21 (October-September) backed by competitive pricing in the global markets and an improvement in international cotton consumption, said Care Rating. Higher exports along with a recovery in domestic cotton demand will help reduce the surplus availability of cotton in the nation despite higher supply, the rating agency said in a note. Cotton farmers from various states are planning to increase the area under cultivation in the coming 2021-22 Kharif season. Indian textile mills have reduced production due to lower domestic demand and labour shortage. The government has allowed mills to operate but markets are closed so mills are facing a cash crunch. Textiles mills dealing in exports are still going strong as Indian yarn prices are attractive. In spot market, Cotton gained by 150 Rupees to end at 22970 Rupees. Ref.Soyaoil yesterday settled down by -0.46% at 1396.9 as higher soybean output could limit edible oil imports. Indian farmers are likely to expand their soybean planting area by more than a tenth in 2021 as record high prices for the oilseed could prompt some to switch from cultivating competing commodities such as cotton and pulses, industry officials said. Increased production of India's main summer-sown oilseed could help the world's biggest vegetable oil importer trim costly purchases of palm oil, soyoil and sunflower oil from Indonesia, Malaysia, Argentina and Ukraine. Global oilseed production is forecast to grow 5 percent in 2021/22, primarily on growth in soybean output in the United States and South America. Global oilseed production is projected to reach 632 million tons on record plantings. Soybean production is forecast to rise 23 million tons to 386 million, a 6-percent increase. Production of all oilseeds is forecast to increase, with all but cottonseed and rapeseed reaching at least 10-year records. Edible Oil industry cautioned the government against resorting to any knee-jerk reaction of lowering import duties to cool down domestic prices, saying it could have a 'very negative' impact on oilseed farmers, kharif planting for which will start in the coming few weeks. As India struggles against curbing the Corona pandemic, exports markets have turned subdued. The importers prefer to wait for the situation to normalize before negotiating for fresh deals. They rather prefer to clear their older stocks first and presently they feel that the older inventory may be sufficient to balance the existing demand for next few weeks easily. The new season arrivals shall continue with good numbers hence there will be ample availability in the market. However from a broader perspective, India's exports outlook has brightened while crop is expected to be lower versus year on year. Also, the nearest export competitors i.e. Turkey and Syria may not supply much to the world due to lower exportable surplus. In Unjha, a key spot market in Gujarat, jeera edged down by -5 Rupees to end at 13975 Rupees per 100 kg.
